

Instructions how to install custom widgets

- 1) Go to Mosaic admin interface <http://ip/apps/data/mosaic20/admin/>
- 2) Click on the settings button on the top right corner and choose **Extensions** menu.

- 3) Click **Add custom widget** button

- 4) Fill the form
 - a. Key (name of archives correspond to widget keys, which need to be specified in the form)
e.g. *alarm_fire_alert*
 - b. Name – custom widget name
 - c. Choose File with archive
- 5) Click on **Save** button
- 6) Widget will appear in the list on the right and you can add it to the visualization screen

List of custom widgets:

- *alarm_fire_alert* – informer which shows bit object. If there is 1 appearing on the object a window is opened with a message
- *jscolor* – lighting control with color picker
- *script* – buttons for launching scenes (always sends 1)
- *temperature3* – temperature output

You can unarchive the widget files and by learning custom widget manual write your own widgets.
